

ABSTRACT OF THE DISCLOSURE

A method for documenting a plurality of source files is provided. Comment data from a current source file of the plurality of source files is accessed. Symbol data from the current source file is accessed. A document from the symbol data and the comment data in the current source file is formed. The accessing of the comment data step, the accessing of the symbol data step, and the forming of the document step is repeated for a next source file of the plurality of source files. An index based on the document files is formed.
